COMPANY PROFILE

BOIKANO INDUSTRIES

Engineering and manufacturing since 2013

Built around the work that needs to be done.

Boikano Industries (Pty) Ltd is a South African engineering and manufacturing business based in Benoni. We support industrial, mining and drilling-industry customers with machining, steel fabrication, repairs and practical workshop problem-solving. Our drilling experience informs the work we do.

Precision machining for practical jobs

From a single replacement part to a planned batch, work starts from the drawing, sample or repair requirement agreed with the customer.

CNC machining

Machining work carried out in the Benoni workshop.

Machined steel components

Custom components made to suit the job requirement.

Turning and component work

Precision-machined rings, housings and related parts.

Machined sleeves and bushes

Turned sleeves, bushes and other cylindrical components.

Drilling knowledge from workshop work

Boikano has accumulated experience supporting customers in the drilling sector. Familiarity with down-the-hole (DTH) and reverse-circulation (RC) applications helps us understand customer requirements and the machining, fabrication and repair work around them.

Experience we bring

Application understanding

Familiarity with drilling methods and the practical requirements of mining and drilling work.

Requirement review

Reviewing customer drawings, samples and worn components before agreeing the work.

Workshop skills

Applying machining, fabrication and repair experience to the job requirement.

Practical problem-solving

Discussing suitable approaches with customers and checking critical details before work begins.

Our experience supports conversations about drilling-sector requirements. Each manufacturing or repair job is assessed against the customer brief, drawings or samples, materials and agreed checks.

Fabrication, repairs and workshop support

Steel fabrication, container and trailer repairs, and made-to-fit components for industrial and transport customers.

Quality checks through the job

01
Confirm
Review the drawing, sample, material and critical dimensions.

02
Measure
Check dimensions during manufacture with suitable tools.

03
Inspect
Compare the completed part with the agreed requirement.

04
Release
Record job status before collection or delivery.
